Prayer Request:

Jackie's heart valves are causing her to have irregular heart beats. Part of the reason Jackie is having this problem is due to excessive water in her body. She is going into Abington Hospital for a procedure that circulates her blood through a machine and removes water. There are medicines which can also help remove water but they are hard on the kidneys. Jackie is already taking one of these medicines but has reached a plateau where the medicine is not removing enough water. Jackie has only 30% use of her kidneys, so this procedure is safer then taking additional diuretics. Please pray for her safety and healing.
